

# Dose Preparation: Moderna

1. In preparation for administration, remove the required number of vials from frozen storage and thaw each vial before use:

- Thaw in refrigerated conditions between 2° to 8°C (36° to 46°F) for 2 hours and 30 minutes. **After thawing, let vial stand at room temperature for 15 minutes before administering.**
- Alternatively, thaw at room temperature between 15° to 25°C (59° to 77°F) for 1 hour. **After thawing, do not refreeze.**

2. **SWIRL VIAL after thawing & SWIRL BETWEEN EACH WITHDRAWAL. DO NOT shake. DO NOT DILUTE the vaccine.**

3. The Moderna COVID-19 Vaccine is a white to off-white suspension. It may contain white or translucent product-related particulates. **Visually inspect the Moderna COVID-19 Vaccine vials for other particulate matter and/or discoloration prior to administration. If either of these conditions exists, the vaccine should not be administered**

- **Each dose is 0.5 mL.**

4. After the first dose has been withdrawn, the vial should be held between 2° to 25°C (36° to 77°F). Record the date and time for first use on the Moderna COVID-19 Vaccine vial label.

- **Discard vial after 6 hours. Do not refreeze.**

I have reviewed the just in time training procedure listed above
