

# Med Prep-Dose Preparation: **JANSSEN**

## MED PREP-DILUTER ROLE: MED PREP STATION

- Remove vials from fridge. Begin dilution and preparation of vaccine at specified time. Each vial contains 5 doses.
- After puncturing the vial, label each vaccine vial with the date and time.
- Draw up vaccines.
- Label vaccines syringe with expiration date/time **Vaccines expire 2 hrs at room temperature.**
- Place vaccine syringe in amber bag to protect from light.
- Place empty vials in designated bin.
- Document vial info and number of vaccinations administered on COVID Vaccine Administration Accountability Worksheet

## DOSE PREPARATION STEPS :

### SWIRL and EXAMINE

- With the vial upright, gently swirl the vaccine for 10 seconds. Do NOT shake.
- Note: Gently swirl the vaccine for 10 seconds before withdrawing subsequent doses
- Examine the vaccine. It should be colorless to slightly yellow, clear to very opalescent suspension. Do not use if liquid contains particulate matter or is discolored.
- Using a new, sterile alcohol prep pad, cleanse the stopper of the multidose vaccine vial and withdraw 0.5mL of the Covid-19 Vaccine.
- Visually inspect each dose in the dosing syringe prior to administration to confirm that there is no discoloration or particulates.
- Label vaccines syringe with expiration date/time
- Bring the dose of vaccine from the designated preparation area immediately to the patient treatment area for administration.

I have reviewed the just in time training procedure listed above
