

Reminder

Photography, Videography, & Audiography by ANY device is **PROHIBITED**

Any photography, videography or audiography that includes MemorialCare employees, volunteers and medical staff members, other than for use in hospital publications, educational materials or for publicity purposes, **may be done only with prior verbal consent.**

Recently, reports have been submitted of patients' visitors and/or family members recording using "Meta" glasses, or smart glasses.

How to recognize smart glasses:

- Some models have a tiny LED light on the frame indicating power or recording status
- Look for small, discreet bumps or protrusions along the frame, near the hinge; this area may house a sensor or camera
- Look at the thickness of the frame at the temples; the frame may be noticeably thicker or bulkier than traditional glasses
- Lenses may have a discreet or faint semi-reflective quality, or a green or reddish tint
