

# When to use the Emergency Room or Urgent Care.

## Do you know the difference?

### EMERGENCY ROOM

**Emergency rooms** are the best option in cases where conditions are life-threatening and may require advanced treatment, such as having chest pain. Because life-threatening conditions are the number one priority in the emergency room, less severe cases will take longer to be treated.

#### Emergency Rooms are Best for Treating:

- Chest pain
- Seizures
- Stroke
- Sudden or severe pain
- Head, neck or eye injuries
- Severe vomiting or diarrhea
- Uncontrolled bleeding
- Fainting, dizziness or weakness
- Broken bones
- Problems breathing/shortness of breath

*This is for informational purposes only and does not constitute medical advice. When in doubt, or when facing a life-threatening condition, please contact 911 for emergency care.*
